### 13 corporate events classes

We would like to draw your attention to the fact that corporate events are now classified into *thirteen (13) EUROFIDAI general classes* (for 16 formerly), including an overview class, and *twenty-eight (28) subclasses* (for 51 beforehand). A subclass is a refined subset of a general class.

### 2 types of data extractions

Note, besides, that two types of data extractions can henceforth be carried out:

- **a *detailed extraction*** which provides complete corporate event information for one or more issuers and for one or more events in txt format. The corporate event subclass is specified in the resulting file in order for you to better understand the data.
- **a *simplified extraction***, by security or issuer code(s), which provides the information related to a preselected corporate event available in a csv format to facilitate data exploitation. A large part of corporate events are covered by the simplified extraction process as explained in Section 4.

# EUROFIDAI EUROPEAN & ASIAN CORPORATE EVENTS DATABASE

- **Data coverage**

This EUROFIDAI database covers corporate events for equities and mutual funds, listed on a European or Asian financial market, from 1977 to December 2016.

- **Information source**

All information contained in the EUROFIDAI Corporate Events Database comes from SIX Financial Information. We reworked the information presentation to make it useful for researchers.

- **Definition of corporate events**

Pending or completed events that affect:

1) the financial and/or physical status of the security. An event can be:

- mandatory (the holder of the security has no choice regarding the change in status of her or his shares, with most mandatory events happening automatically, with no event required on the part of the holder, e.g. stock split),
- voluntary (the holder has a choice about how the event will affect the status of her or his shares, with some event required on the part of the holder, e.g. rights offering linked to a corporate reorganization (merger or acquisition)) or
- mandatory with options.

2) the issuers (Name change, Sector change, General meeting, Bankruptcy proceedings...).

The EUROFIDAI Corporate Events Database is updated once a year.

EUROFIDAI provides a large range of corporate events. These corporate events are classified into thirteen (13) EUROFIDAI classes:

- Corporate events - Overview (C00)
- Company reorganization (C01)
- Issue/ Change of capital structure (C02)
- Split/ Reverse split/ Nominal adjustment (C03)
- Securities assimilation (C04)
- Redenomination of nominal currency (C05)
- Debtor change (C06)
- Purchase/ Repurchase/Exchange (C07)
- Other events (C08)
- Listing/ Delisting/ Suspension (C09)
- Legal proceedings (C10)
- Meeting/ General meeting (C11)
- Distribution (C12)

EUROFIDAI offers its own categorization of corporate events by grouping together SIX Financial Information corporate event classes that are similar in nature. Our classification is clearer and more synthetic. There is no loss of information about the specificity of each corporate event.

### Correspondence table

This table links the various codes used in the different EUROFIDAI databases:

- the issuer codes
- the EUROFIDAI codes
- the VALOREN codes
- the ISIN codes
- the SICOVAM codes
- the FININFO codes
- the Issuer Ibei Codes

It also allows searching for a security (resp. issuer) code using either the name of a security or the name of an issuer.

## 1. EUROFIDAI classification of corporate events

The EUROFIDAI classification of corporate events offers a balance between levels of aggregation, for those who look for a general analysis, and levels of detail, for those who look for a more detailed analysis.

### EUROFIDAI classification: a comprehensive structure for corporate actions

Corporate events are classified into twenty-eight (28) subclasses. Each corporate event is allocated to the subclass that most closely represents its nature. The 28 subclasses are then grouped together to form thirteen (13) general classes (including an overview class), called EUROFIDAI classes.

**Figure 1: Structure of EUROFIDAI classification for corporate events**

Subclasses are obtained by combining the former and current SIX Financial Information classification of corporate events. Indeed, SIX Financial Information has changed its corporate events classification since 2000, but it has left the format of its old corporate events data unchanged.

A corporate event can involve one or more issuers, and each event can be made up of several subevents. Each subevent can have an immediate effect on the issuers involved or on any of the securities issued by them.

Separate information is reported for each issuer involved. For instance, if the issuers A and B are involved in the same corporate event, information about this event is associated with issuer A as well as with issuer B.

Please note that the search for corporate events in the EUROFIDAI database must be made with EUROFIDAI classes.

## 2. Description of EUROFIDAI general classes

This section describes each EUROFIDAI general class. These different classes are summarized in **Table 1**.

### 2.1. Corporate events-overview (C00)

The Overview class gives a list, for a considered period, of all the corporate events related to a company and its issued securities (stocks and/or mutual funds).

### 2.2. Company reorganization (C01)

Company transformations resulting from a merger, a reorganization or a scheme of arrangement fall into this general class. Company reorganization can designate the incorporation of a holding or a spin-off.

This class also covers other types of changes or transformations related to a company. These changes can be:

- Change of location
- Change of legal form
- Sector change
- Change of name

### 2.3. Issue/ Change of capital structure (C02)

This class presents capital increases and reductions, with or without compensations, as well as special rights offers and issue conditions.

### 2.4. Split/ Reverse split/ Nominal adjustment (C03)

This class is used to report company transformations resulting from the following corporate events:

- Split
- Reverse split
- Nominal adjustment

## 2.5. Securities assimilation (C04)

This general class includes the assimilation of debt instruments, options/ conversions, and other transitional securities with the original equity /security/ instrument.

## 2.6. Redenomination of nominal currency (C05)

This general class reports information about a conversion of a nominal currency to another, as well as the different redenomination methods used.

## 2.7. Debtor change (C06)

Debtor changes are indicated in this class. It is often assumed that the debtor will change due to an event such as an institution name change, merger, demerger, or reorganization.

## 2.8. Purchase/ Repurchase/ Exchange (C07)

This class is used to report capital changes resulting from purchase, repurchase, and exchange events. It contains the following subevents:

- Exchange of securities resulting from a company reorganization (e.g. merger, demerger etc...), from legal proceedings (e.g. liquidation) or from the consolidation of different securities of the same kind into one
- Repurchase of outstanding securities
- Purchase and exchange offers (takeovers)

## 2.9. Other events (C08)

This class includes information on corporate events that are not reported in other classes. EUROFIDAI reserves the right to change this category by adding other useful corporate events.

## 2.10. Listing/ Delisting/ Suspension (C09)

Quotation changes affecting an issuer are listed in this general class. These changes may be:

- Listing (IPO)
- Delisting
- Suspension

## 2.11. Legal proceedings (C10)

This class is used to present class actions, settlement, bankruptcy and dissolution/ liquidation proceedings as well as the details about the different procedural phases. We define:

- Class action as the claims which can be instituted against an issuer by individuals or a group of creditors, as well as by actual or former holders of shares (stocks or mutual funds)
- Settlement proceedings as schemes of settlements agreed to between an issuer and its debtors
- Bankruptcy and dissolution/ liquidation proceedings as the other legal proceedings that can be instituted against an insolvent issuer

Separate information is reported for each involved stakeholder.

## 2.12. Meeting/ General meeting (C11)

This class is used to report information on different meetings organized by a company. These meetings can be: Ordinary/ annual general meetings, Extraordinary general meetings, Bondholder meetings, Creditor meeting, Hearings, etc.

## 2.13. Distribution (C12)

This general class includes all kinds of distributions related to a security (e.g. ordinary & extraordinary dividends, instrument allotments, liquidation distribution etc...). The distribution may concern only one particular trading market or all markets in which the issuer's securities are traded. If the variable "**Stock exchange name**" is "*All Markets*", this means that the distribution concerns all markets in which the issuer's securities are traded.

### 3. Statistics on the EUROFIDAI European & Asian Corporate Events Database

The EUROFIDAI Corporate Events Database contains 5 177 424 corporate events. These corporate events cover more than 615 357 different securities and 210 748 different issuers.

Data-gathering on some corporate event categories started in 1977, while for others data-gathering started in 2000.

**Table 2: Statistics**

This table shows the number of observations, the number of related issuers and the period of availability for each class of corporate event. The table below is proposed indicatively. The last day of data availability corresponds to the day of the last update.

## 4. Data extraction : general presentation

Within the EUROFIDAI database, two types of data extractions can be performed:

- *a detailed data extraction* that provides corporate event information for one or more issuers and for one or more events in txt format;
- *a simplified data extraction*, by security or issuer code(s), that delivers the information related to a preselected corporate event in csv format to facilitate data exploitation.

The two extraction methods can be considered as complementary and a large part of corporate events are covered by the simplified extraction.

**Table 3 : EUROFIDAI general classes available for detailed and simplified extractions**

## 5. Data extraction : procedures for users and detailed description of the variables

In this section, we explain how to search for a corporate event and we describe the content of the resulting output file. More precisely, the research process is the following:

- 1] choose a type of data extraction (according the corporate event information needed)
- 2] specify a research key
- 3] run the query

The issuer [resp. security] code(s) research stage is presented in the following section (5.1). Sections 5.2 and 5.3 explain more in detail how to proceed to, respectively, detailed and simplified downloads. Finally, variables reported in output files are described in section 5.4.

## 5.1. Issuer and/ or security code research stage

### Corporate events

**Figure 2: Tabs for downloads**

Complete information about corporate events is obtained using the “detailed extraction” tab. The search can only be performed via issuer code(s).

An issuer code can be found in different ways:

- Via an issuer name, ISIN or EUROFIDAI code under the “Code research” tab
- Via the “Code list” under the “Code research” tab
- Via the code mapping table on EUROFIDAI’s website

A simplified extraction can be run from either the “by security” or the “by issuer” tab, according to the nature of the corporate event under consideration. In this case, the query is carried out by security or issuer code(s).

You can refer to table 4 to check those search possibilities; Det. Ext. refers to detailed extraction and Simp. Ext. to simplified extraction.

#### - Issuer codes

You can obtain the codes for one or more issuers via the “Code research” tab. To do so, you simply need *either the name* or the *EUROFIDAI* or the *ISIN code* of the instrument that interests you.

An *Issuer code* research by *EUROFIDAI* or *ISIN code* only provides the last existing *issuer code* available in the EUROFIDAI database. It does not permit to get all historical *issuer codes* associated with a particular instrument in the past.

You can also extract a list of all issuers that have undertaken a particular type of corporate event by specifying the general class of your interest in the research criteria zone. In the same way, you can obtain a list of issuer codes based on their domicile.

In addition to the *issuer code*, *name* and *domicile*, you can obtain the *codes* and *names* of the instruments associated with the company.

Example of *issuer code* research:

If you want to search for the *issuer code* of DANONE, you have several options:

- research by *name*
- research by *EUROFIDAI code*
- research by *ISIN code*

In this example, we chose to search by *name* and by *domicile* (see Figure 2). You can filter your research according to the instrument type.

### Figure 4: Result of search using issuer name of DANONE

When downloading the results of a code research, choose “only codes” to obtain a list of codes for the data extraction, and “codes and other information” if you’d like to view details about each issuer and select codes based on these details.

Figure 4 shows the outcome of this search. In the first column, we find the issuer codes of all issuer names which contain “DANONE”. In this case, not all results are displayed. For a given issuer, there is a unique issuer code (or GK code).

Assuming we are interested in Danone SA, the issuer code we are looking for is 474945. We moreover observe that it is associated with several instrument codes (Valoren

codes). This search output could be useful to identify the name of an issuer's security involved in the requested corporate event.

- **Security Code research stage :**

To obtain codes for one or more securities, you should proceed in a way similar to that described for issuer codes. You simply need either the name or the issuer code(s) of the related company(ies) as a starting point.

Note that you can also search for security code(s) by specifying only the kind of instruments you are interested in.

## 5.2. Detailed extraction: data retrieval stage & explanation of the output file

- **Data retrieval stage :**

After collecting the *issuer code(s)*, you can download the corporate event information you need by picking the EUROFIDAI *general class of corporate event* on the "detailed extraction" tab.

The corporate event database can be interrogated for one or more selected issuers. In the latter case, you can:

- either enter isolated issuer codes manually, separated by semicolons;
- or submit a created issuer code file.

Besides, the detailed extraction allows simultaneous searching for several corporate event classes, for one or more firms. Searching for one or more corporate events without indicating any *issuer code* does not work however.

**NB:**

The "*Corporate Actions – Overview (C00)*" class provides the list of all types of corporate actions associated with a particular issuer, without displaying all the details of each corporate action.

Example of a complete *corporate event* information research:

You want to get complete information about potential forward stock splits, occurred after 2000, for the company Danone SA. Assuming you already know the Danone SA issuer code (**474945**), you can then process to a detailed extraction.

First, you must specify the time period for which you want to make your search. However, specifying the time period is not mandatory. By default, if no period is indicated, we consider the entire period.

Then you enter DANONE's *issuer code* (**474945**). The last stage consists of selecting the appropriate corporate event class code (here **C03** for Split/ Reverse split/ Nominal Adjustment). It is possible to choose simultaneously several corporate event classes (or you may choose all corporate events if desired).

**Figure 5: Example of a detailed extraction, download page**

The next section explains how to read the resulting txt file.

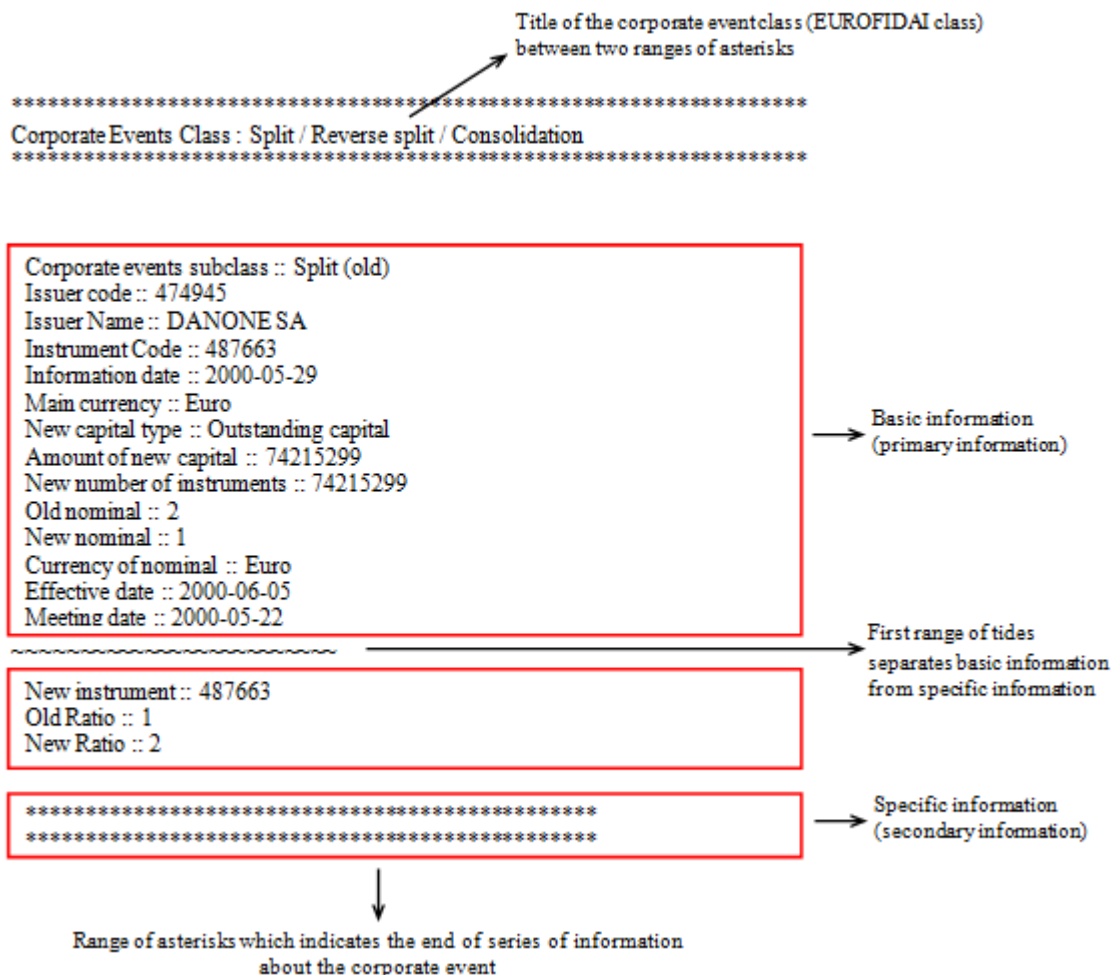

- ***How to read an output file?***

In the text output file, events are sorted first by class of corporate event (EUROFIDAI class). If the search-request contains several classes, the output file is organized firstly by class, secondly by subclass of corporate event, thirdly by company (if the search concerns several companies), and finally by date.

The title of the corporate event class (EUROFIDAI class) under consideration is posted at the top of the file or text, between two ranges of asterisks (see **Figure 6**).

Information about each individual corporate event is ended with a double-range of asterisks (\*). Thus, the double-range of asterisks (\*) points out the beginning of information about another new corporate event.

Information about a corporate event is divided into two sections: basic information (primary information) and specific information (secondary information), separated by a range of tildes (~). The basic information is presented first, followed by the specific information (see **Figure 6**).

**Figure 6: Example of an output file**

This figure represents an example of a corporate event search result. The class of corporate event here is "Split/ Reverse split/ Consolidation" for DANONE (issuer code: 474945).

The basic information section contains common information we generally find in the output files of all classes of corporate events. This information is: *Corporate event subclass, Issuer code, Issuer Name, Information date, and Instrument code.*

Specific information provides more detail concerning the corporate event. The nature of information contained in the specific information section often varies according to the class of corporate event. It is important to note that for some corporate events, "*General Meeting*" for example, a lot of specific information could be given. In this case, each piece of specific information is also separated by a range of several tildes (~).

In the output file, the names of variables and their associated information are separated by two colons (::) (see Figure 7).

- **Example: "Purchase/ repurchase/ exchange" case**

In this example, we searched for "*Purchase/ repurchase/ exchange*" events made by the issuer 127156. We found three outcomes realized on different dates. Only the first one is commented upon here as an example (see Figure 6).

1 indicates the subclass of corporate event "*Purchase/ repurchase/ exchange*", here *Exchange of securities*

2 indicates the code of the issuer

In the specific information section, we notice three elements (a, b and c).

a *References to old Instrument*: this zone presents the characteristics of the instrument to be exchanged.

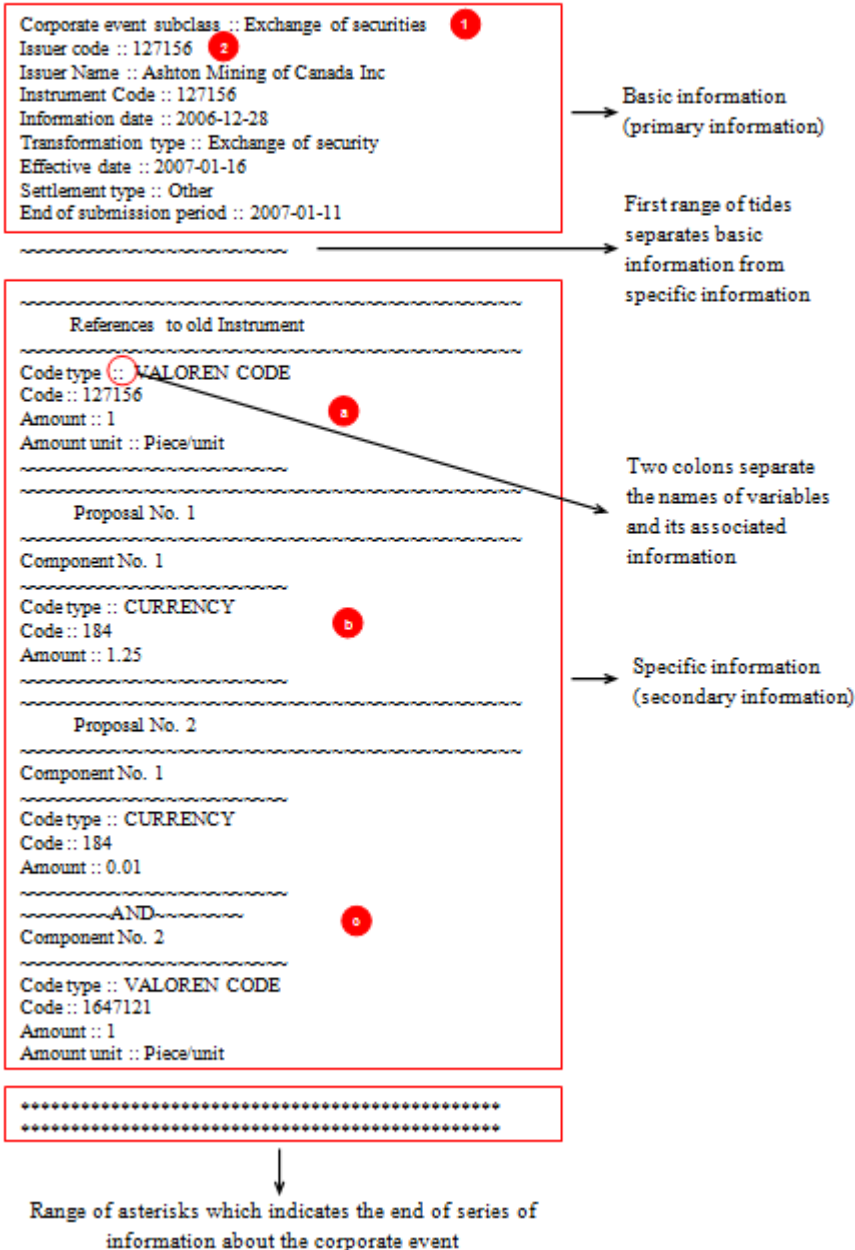

*Proposal No. 1* indicates the first exchange choice.

*Proposal No. 2* indicates the second exchange choice.

A choice must be made between the proposals if there is more than one proposal.

In one proposal, you can have several components.

### 5.3. Simplified extraction: data retrieval stage

After collecting the *issuer [resp. security] code(s)*, you can download the corporate event information you need by picking the EUROFIDAI *general class of corporate event* on the relevant tab.

The corporate event database can be interrogated for one or more selected issuers. In the latter case, you can:

- either enter isolated issuer codes manually, separated by semicolons;
- or submit a created issuer code file (txt or csv formats are accepted).

Selecting several classes (or items) is not possible and searching for one or more corporate events without indicating any *issuer [resp. security] code* does not work.

Example of *corporate event synthetic information* research:

You want to know whether DANONE has proceeded to stock forward & reverse splits since 2000. Moreover, you know the Valoren code of Danone's common stock (**487663**). You can thus run a simplified data extraction, by security.

First, you must specify the time period for which you want to make your search. However, specifying the time period is not mandatory. By default, if no period is indicated, we consider the entire period.

Then you enter DANONE's *common stock code* (**487663**). The last stage consists of selecting the appropriate corporate event class/ item (here **C03-Item 2** Split/ reverse split).

## 5.4. Detailed description of the variables

The following tables present the kind of information or data that can be found in each EUROFIDAI general class.

Please note that the availability of a variable depends on the subclass of the corporate event and the type of extraction conducted. More precisely, for a considered type of extraction:

- a shaded value indicates the variable may be specified;
- a blank cell with « NA » signals the variable is never completed.

**EUROFIDAI is a public academic** institute funded by the CNRS,  
which benefits from Intramural Service Unit (UPS 3390) status.

The National Center for Scientific Research (CNRS) is a public organization under the responsibility of the French Ministry of Higher Education and Research.

As a pluridisciplinary institution, it covers all scientific disciplines, including the humanities and social sciences, biological sciences, nuclear and particle physics, information sciences, engineering and systems, physics, mathematical sciences, chemistry, earth sciences and astronomy, ecology and the environment.

As an interdisciplinary body, it promotes interaction between disciplines.

With 34.000 researchers, engineers and technicians, CNRS is organized around 10 thematic institutes which orchestrate its scientific policy, while its 19 divisions represent it in the French regions.

CNRS has a budget of approximately €3.3 billion. Its 1.100 research units, including 95% in partnership with universities, higher education institutions and other research organizations, are present throughout France.
